VAT Pro MTD Bridging Software

Our VAT Pro MTD Bridging software is a digital tool incorporating the new Making Tax Digital APIs, which are used to connect accounting software or spreadsheets to HMRC systems. Our software sends information to and collects information from HMRC using their MTD API's.

The software requires a Windows operating system and supports the full range of Making Tax Digital APIs and can be used to retrieve VAT Obligation, VAT Return, VAT Liability, and VAT Payment information from HMRC. The data can be exported in Excel or CSV format enabling information to be returned digitally back to the accounting software or spreadsheet solution.

VAT Pro MTD Bridging software is a desktop application allowing connections to be made to HMRC systems direct from the end user's PC. While many other products require the data to be uploaded to a third party server, our software removes this requirement by providing a direct connection to HMRC systems, eliminating the potential for data security issues, and removing the dependency on third party web services.

VAT Return information generated by an existing in house accounting system and output to a file (Excel, CSV, or XML file formats) is collected by our software. Information is validated as part of the collection process, data can then be reviewed before submitting digitally to HMRC.

Our software will import, validate, and submit VAT Information for multiple companies in a single, simple process.

VAT Pro MTD Bridging Software continued

VAT Returns

Successful Submissions

Company Name	VAT Reg No	Period End
test 3 - 666509914	666509914	2017-06-30
test 4 - 666765864	666765864	2017-06-30

Export To Excel

Failed Submissions

Company Name	VAT Reg No	Period End	Message
test 3 - 666509914	666509914	2017-05-31	There is no VAT Return due for this period.
test 4 - 666765864	666765864	2017-03-31	The VAT Return for this period has already been fulfilled.
